Redesigning the Planet: Regions: Regional Ecological Designs of Nature & Cultures Alan Wittbecker, Michael W. Fox, Paolo Soleri, John B. Cobb Jr., Arne Naess, Alan R. Drengson, R. Buckminster Fuller
This work is about sharing regional resources and services of the planet to meet the needs of all living beings and their community patterns. It uses ecological design to create a simple method to implement and manage the sharing: First, we assess what the planet needs to keep developing in a stable flow, then we set aside a satisfactory area of the planet to ensure the continuing operation of evolution in wild systems. Next, we measure the ranges of productivities of wild ecosystems as well as agricultural and urban systems, then use those results to determine optimum human populations for regions. Within human systems, every culture would claim a share of local resources and global services.

For example, the Colorado river would be allocated a percentage of water to keep the river and its downstream ecosystems healthy—this may require 50% or more of all the water flow. The remaining water would be divided between resident cultures sharing the river environments up and downstream. This approach promises a fair way to deal with carbon emissions, toxic wastes, and energy use, also.

The equal apportionment of ‘resources’ to all cooperating participants in a regional commons is supported by the practice of recognizing and honoring the legacy of the entire planet that hosts its legatees as tenants and is supported by the ‘rule’ of all beings together, although in the human legal system, humans represent the interests of all other beings, much as they are starting to do now. This reapportionment is enhanced by the wisdom of harmony and the drawing and making of ecological zones, which emphasizes the relative separation of wild and artificial areas. This reapportionment of ‘resources’ that human communities have already claimed, as well as of resources that have been badly distributed as a result of theft or violence, may cause some degree of discomfort or suffering, but that is minimal compared to the suffering and death under the current industrial system, which encourages the consumption of everything and large differences in the distribution of wealth.

Like metaphysics, ecological design has a vision that exceeds its bounds and a reach that exceeds its grasp. And, we have to use it to explore possibilities of local and regional harmony, without having enough knowledge or experience. Ecological design requires participation and cooperation to accomplish its ambitious goals. It has to be flexible and adapt to changing environments. It has to be adaptive and accept feedback.

This means understanding challenges and problems, as well as natural and artificial ecosystems, histories and cycles, before using a variety of physical and conceptual tools to create ecological designs on regional scales, but considering the local and global implications. This means trying to design places, ecosystems and landscapes, as well as cycles and processes. It means redesigning flows of minerals and gases, wetlands and streams, domestic and wild forests, and animal paths and reserves. It means redesigning human patterns, from transportation corridors to traditional and modern cultures. It means redesigning agriculture, cities—traditional cities and proposed arcologies—buildings, neighborhoods, vehicles, industries, and medicine. It means trying to redesign civilization out of physical and social traps; it means redefining cultural adaptations, corporate goals and responsibilities, formal commons, styles of conflict, economic frameworks, political forms and sizes, religious applications, and even advertising. The purpose of all this is to restore harmony to systems that support health and development.

From reader reviews:

Lucy Fletcher:

The book untitled Redesigning the Planet: Regions: Regional Ecological Designs of Nature & Cultures is the book that recommended to you to see. You can see the quality of the book content that will be shown to a person. The language that article author use to explained their way of doing something is easily to understand. The article author was did a lot of study when write the book, to ensure the information that they share for you is absolutely accurate. You also could possibly get the e-book of Redesigning the Planet: Regions: Regional Ecological Designs of Nature & Cultures from the publisher to make you far more enjoy free time.

Laura Grier:

You can spend your free time to learn this book this publication. This Redesigning the Planet: Regions: Regional Ecological Designs of Nature & Cultures is simple to develop you can read it in the area, in the beach, train as well as soon. If you did not have much space to bring often the printed book, you can buy the particular e-book. It is make you simpler to read it. You can save often the book in your smart phone. Therefore there are a lot of benefits that you will get when one buys this book.

Ida Johnson:

This Redesigning the Planet: Regions: Regional Ecological Designs of Nature & Cultures is fresh way for you who has fascination to look for some information given it relief your hunger of knowledge. Getting deeper you on it getting knowledge more you know or you who still having little bit of digest in reading this Redesigning the Planet: Regions: Regional Ecological Designs of Nature & Cultures can be the light food to suit your needs because the information inside this particular book is easy to get by means of anyone. These books acquire itself in the form that is reachable by anyone, yep I mean in the e-book contact form. People who think that in guide form make them feel sleepy even dizzy this publication is the answer. So there isn't any in reading a publication especially this one. You can find what you are looking for. It should be here for an individual. So , don't miss the item! Just read this e-book type for your better life and also knowledge.

Mildred Lyons:

That guide can make you to feel relax. This kind of book Redesigning the Planet: Regions: Regional Ecological Designs of Nature & Cultures was colourful and of course has pictures on the website. As we know that book Redesigning the Planet: Regions: Regional Ecological Designs of Nature & Cultures has many kinds or genre. Start from kids until adolescents. For example Naruto or Investigator Conan you can read and feel that you are the character on there. Therefore , not at all of book are make you bored, any it offers up you feel happy, fun and loosen up. Try to choose the best book in your case and try to like reading that will.
