**Modelling the Wireless Propagation Channel: A simulation approach with Matlab** Fernando Pérez Fontán, Perfecto Mariño Espiñeira

**A practical tool for propagation channel modeling with MATLAB® simulations.**

Many books on wireless propagation channel provide a highly theoretical coverage, which for some interested readers, may be difficult to follow. This book takes a very practical approach by introducing the theory in each chapter first, and then carrying out simulations showing how exactly put the theory into practice. The resulting plots are analyzed and commented for clarity, and conclusions are drawn and explained from the obtained results.

Key features include:

- A unique approach to propagation channel modeling with accompanying MATLAB® simulations to demonstrate the theory in practice
- Contains step by step commentary and analysis of the obtained simulation results in order to provide a comprehensive and structured learning tool
- Covers a wide range of topics including shadowing effects, coverage and interference, Multipath Narrowband channel, Multipath Wideband channel, propagation in micro and pico-cells, the land mobile satellite (LMS) channel, the directional Multipath channel and MIMO and propagation effects in fixed radio links (terrestrial and satellite)
- The book comes with an accompanying website that contains the MATLAB® simulations and allows readers to try them out themselves
- Well suited for lab-use, as reference and as a self-learning tool both for advanced students and professionals

*Modeling the Wireless Propagation Channel: A simulation approach with MATLAB®* will be best suited for postgraduate (Masters and PhD) students and practicing engineers in telecommunications and electrical engineering fields, who are seeking to familiarise themselves with the topic without too many formulas. The book will also be of interest to network engineers, system engineers and researchers

As a student exactly feel bored in order to reading. If their teacher requested them to go to the library in order to make summary for some book, they are complained. Just very little students that has reading's heart or real their interest. They just do what the trainer want, like asked to go to the library. They go to at this time there but nothing reading critically. Any students feel that studying is not important, boring and also can't see colorful pics on there. Yeah, it is to get complicated. Book is very important for you. As we know that on this era, many ways to get whatever we would like. Likewise word says, ways to reach Chinese's country. Therefore , this Modelling the Wireless Propagation Channel: A simulation approach with Matlab
