The Report of the Presidential Commission on the Space Shuttle Challenger Accident - The Tragedy of Mission 51-L in 1986 - Volume Two, Appendix E, F, G, H, I, J, and K, including Feynman Analysis

Presidential Commission on the Space Shuttle Challenger Accident, Rogers Commission, National Aeronautics and Space Administration (NASA), World Spaceflight News

This is the first section of the large Volume Two of the report issued by the Presidential Commission on the Space Shuttle Challenger Accident (also known as the Rogers Commission after its chairman, William Rogers). This section includes Appendix E, F, G, H, I, J, and K, including the penetrating analysis of Shuttle safety issues by famed physicist Richard Feynman. The report has been professionally converted for accurate flowing-text ebook format reproduction.

Contents: Appendix E: Independent Test Team Report to the Commission * Appendix F: Personal Observations on Reliability of Shuttle * Appendix G: Human Factors Analysis * Appendix H: Flight Readiness Review Treatment of O-ring Problems * Appendix I: NASA Pre-Launch Activities Team Report * Appendix J: NASA Mission Planning and Operations Team Report * Appendix K: NASA Development and Production Team Report

On the twenty-fifth Space Shuttle flight, Challenger exploded 73 seconds after liftoff on January 28, 1986. The crewmembers of the Challenger represented a cross-section of the American population in terms of race, gender, geography, background, and religion. Christa McAuliffe was to become the first teacher to fly in space. The explosion became one of the most significant events of the 1980s, as billions around the world saw the accident on television and empathized with any one of the several crewmembers killed. The launch took place on an unusually cold day, with temperatures below freezing and ice present on the launch pad and SRBs. NASA and the SRB contractor, Morton Thiokol, debated the safety of the launch; engineers urged managers to delay the launch. President Ronald Reagan formed this Commission to investigate the accident, with the report issued in June 1986.

In view of the findings, the Commission concluded that the cause of the Challenger accident was the failure of the pressure seal in the aft field joint of the right Solid Rocket Motor. The failure was due to a faulty design unacceptably sensitive to a number of factors. These factors were the effects of temperature, physical dimensions, the character of materials, the effects of reusability, processing, and the reaction of the joint to dynamic loading. The Commission concluded that there was a serious flaw in the decision making process leading up to the launch of flight 51-L. A well-structured and managed system emphasizing safety would have flagged the rising doubts about the Solid Rocket Booster joint seal. Had these matters been clearly stated and emphasized in the flight readiness process in terms reflecting the views of most of the Thiokol engineers and at least some of the Marshall engineers, it seems likely that the launch of 51-L might not have occurred when it did. The waiving of launch constraints appears to have been at the expense of flight safety. There was no system which made it imperative that launch constraints and waivers of launch constraints be considered by all levels of management. The Commission concluded that the Thiokol Management reversed

its position and recommended the launch of 51-L, at the urging of Marshall and contrary to the views of its engineers in order to accommodate a major customer.

From reader reviews:

Daniel Gutierrez:

What do you about book? It is not important along with you? Or just adding material if you want something to explain what the one you have problem? How about your spare time? Or are you busy man? If you don't have spare time to do others business, it is gives you the sense of being bored faster. And you have time? What did you do? Everybody has many questions above. They have to answer that question since just their can do that will. It said that about publication. Book is familiar in each person. Yes, it is appropriate. Because start from on jardín de infancia until university need this particular The Report of the Presidential Commission on the Space Shuttle Challenger Accident - The Tragedy of Mission 51-L in 1986 - Volume Two, Appendix E, F, G, H, I, J, and K, including Feynman Analysis to read.

Tammi Rosado:

Reading a guide can be one of a lot of pastime that everyone in the world adores. Do you like reading book and so. There are a lot of reasons why people fantastic. First reading a publication will give you a lot of new information. When you read a guide you will get new information because book is one of many ways to share the information as well as their idea. Second, studying a book will make anyone more imaginative. When you looking at a book especially fictional book the author will bring that you imagine the story how the character types do it anything. Third, you are able to share your knowledge to other individuals. When you read this The Report of the Presidential Commission on the Space Shuttle Challenger Accident - The Tragedy of Mission 51-L in 1986 - Volume Two, Appendix E, F, G, H, I, J, and K, including Feynman Analysis, you can tells your family, friends and soon about yours guide. Your knowledge can inspire different ones, make them reading a guide.

Carlos Pollard:

Playing with family in a very park, coming to see the water world or hanging out with good friends is thing that usually you might have done when you have spare time, then why you don't try point that really opposite from that. One particular activity that make you not experience tired but still relaxing, trilling like on roller coaster you have been ride on and with addition associated with. Even you love The Report of the Presidential Commission on the Space Shuttle Challenger Accident - The Tragedy of Mission 51-L in 1986 - Volume Two, Appendix E, F, G, H, I, J, and K, including Feynman Analysis, it is possible to enjoy both. It is fine combination right, you still desire to miss it? What kind of hang type is it? Oh can happen its mind hangout folks. What? Still don't understand it, oh come on its named reading friends.

Benjamin Herrera:

The book untitled The Report of the Presidential Commission on the Space Shuttle Challenger Accident - The Tragedy of Mission 51-L in 1986 - Volume Two, Appendix E, F, G, H, I, J, and K, including Feynman Analysis contain a lot of information on it. The writer explains the girl idea with easy technique. The language is very easy to understand all the people, so do not necessarily worry, you can easy to read the idea. The book was written by famous author. The author gives you in the new period of time of literary works. You can actually read this book because you can continue reading your smart phone, or program, so you can read the book in anywhere and anytime. In a situation you wish to purchase the e-book, you can wide open their official web-site along with order it. Have a nice study.
